

HTML Introduction

- HTML stands for Hyper Text Markup Language.
- HTML describes the structure of Web pages using markup.
- HTML elements are represented by tags.
- Browsers do not display the HTML tags, but use them to render the content of the page.

HTML Editors

- Web pages can be created and modified by using professional HTML editors.
- We believe using a simple text editor is a good way to learn HTML.
- There are Many HTML Editors .
like **Notepad** , **Notepad++**.

Save and Run HTML Page

- **Windows 8 or later:**

Open the **Start Screen** (the window symbol at the bottom left on your screen). Type **Notepad**.

- **Windows 7 or earlier:**

Open **Start > Programs > Accessories > Notepad**

- Save the file on your computer. Select **File > Save as** in the Notepad menu.
- Name the file "**index.htm**" or **index.html**
- Double click on the file and Run.

HTML Structure

```
<html>  
<head>  
</head>  
<body>  
    Hello World  
</body>  
</html>
```

HTML Elements

- An HTML element usually consists of a **start** tag and **end** tag, with the content inserted in between:
`<tagname>Content</tagname>`
- The HTML **element** is everything from the start tag to the end tag:
`<p>My first paragraph.</p>`
`<b>Hello World</b>`

HTML Elements

<html>

<body>

<h1>My First Heading</h1>

<p>My first paragraph.</p>

</body>

</html>

HTML Headings

- Headings are defined with the `<h1>` to `<h6>` tags.

`<h1>`This is heading 1`</h1>`

`<h2>`This is heading 2`</h2>`

`<h3>`This is heading 3`</h3>`

`<h4>`This is heading 4`</h4>`

`<h5>`This is heading 5`</h5>`

`<h6>`This is heading 6`</h6>`

HTML Paragraphs

- The HTML `<p>` element defines a **paragraph**:
- **Example :**
 - `<p>paragraph-1</p>`
 - `<p>paragraph-2</p>`
 - `<p>paragraph-3</p>`
 - `<p>paragraph-4</p>`

HTML Links

- The **href** attribute specifies the destination address (<https://www.google.com/>) of the link.
- Clicking on the link text will send you to the specified address.
`<a href="http://www.google.com">Google</a>`

HTML Links

Local Links

A local link (link to the same web site) is specified with a relative URL (without `http://www....`)

`<a href="home.html">Home Page</a>`
